"From underwater villages to underwater caves: paleoenvironmental, geoarchaeological, and paleontological investigations in Cuba"

This presentation will highlight recent multi-disciplinary research undertaken in Cuba that has sought to explore questions concerning human resilience and adaptations to abrupt environmental change and the role that humans may have played in the Late Quaternary extinction event in the Caribbean.

Mercredi 14 mars, 12hrs, Local C-2059
Pavillon Lionel-Groulx (3150 rue Jean Brillant)
